

TROPICAL ASPHALT

ETERNALASTIC

PRIMERS

Metal Primer

#960

SOLIDS BY WEIGHT.....	64.5%
DRYING TIME.....	2 Hours
APPLICATION RATE....	1 gal/200 sq.ft.
VISCOSITY.....	80-90 KU

Water based primer designed for use only on rusted metal areas. Where there is spot rust, application should occur to the rusted areas only after the spot is thoroughly brushed with a wire brush. If rusting is prevalent throughout the roof surface, #960 should be applied with an airless sprayer. All surface preparation should be complete before application. The coverage rate is 200-sq. ft. per gallon.

Concrete Primer

#970

SOLIDS BY WEIGHT.....	25%
DRYING TIME.....	2 Hours
APPLICATION RATE....	1 gal/200 sq.ft.
VISCOSITY.....	70-80 KU

Primer to be used when applying Eternalastic #911 to any concrete surface. #970 will absorb into the concrete, thus preparing the surface to give Eternalastic #911 maximum adhesion and performance. Use a brush or roller for application. The coverage rate is 200-sq. ft. per gallon. Eternalastic #911 is never to be applied to unprimed concrete.

Acrylic Asphalt Primer

#980

SOLIDS BY WEIGHT.....	25%
DRYING TIME.....	2 Hours
APPLICATION RATE....	1 gal/200 sq.ft.
VISCOSITY.....	80-90 KU

This primer is used where there is residual asphalt on metal surfaces, on smooth surface built-up roofs, and on modified asphalt roofs. Removal of as much residual asphalt as possible is necessary. #980 can be applied using either a paint roller or an airless sprayer depending upon the amount of surface needed to be primer. The main purpose of #980 is to lock in residual oils that can migrate and cause damage to Eternalastic white coatings. The coverage rate is 200-sq. ft. per gallon.
